Education

Indian Institute of Technology, Bhilai

CGPA-7.93

Bachelor of Technology in Data Science and Artificial Intelligence

Nov, 2021 - May, 2025

Technical Skills

Languages: Python, C, C++, SQL

Software and Tools: Jupyter Notebook, Power BI, MySQL, MS Excel, AWS (S3)

Operating Systems: Windows, Unix/Linux

Libraries and Frameworks: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, Plotly, Scipy, Tensorflow, PyTorch, Keras, tqdm, LangChain, NLTK, PySpark, Transformers, Flask, Streamlit, OpenCV, OpenAI, Pillow

Work Experience

ZS

Jun 2025 – Present

Business Technology Solutions Associate

On-Site

- Developed a real-time data pipeline using SQL, Python, and PySpark to generate 1,000+ daily suggestions for Sales Rep interactions with Healthcare Professionals via calls, emails, and insights based on analytics use cases focused on informing marketing strategies and commercial execution of pharmaceutical products and vaccines.
- Scaled the pipeline across multiple countries and diverse market segments, optimizing workflows based on business requirements and ensuring smooth SIT/UAT-to-production deployments with high performance and reliability.

AI4SEE

Jul 2024 – Aug 2024

Data Science Intern

Remote

- Developed a python script which is used to create a synthetic multivariate sensor time series datasets based on Laptop sensors by capturing the information from these sensors and performed anomaly detection on the created dataset.

Projects

IMPROVING MINBERT WITH CLN | *Transformers, Torch, scipy*

[GitHub](#)

- Integrated task-specific normalization parameters into the BERT model, improving its flexibility and overall performance by replacing standard normalization layers with CLN (Conditional Layer Normalization).
- Successfully implemented and evaluated CLN-Enhanced BERT on additional pre-trained datasets, demonstrating improved efficiency and adaptability of the model for various natural language processing applications

WACSE: Word-Aligned Cross-lingual Sentence Embeddings | *Transformers, SimAlign, Torch*

[GitHub](#)

- Extracted word alignments between the sentences using SimAlign. WACSE framework was introduced which has 3 training objectives :- Translation ranking (Ensures Sentence level similarity), Aligned Word Prediction (Predicts aligned words in parallel sentences using MLM), Word Translation Ranking (Aligns semantically equivalent words).
- Worked On 3 tasks:- Bitext Retrieval, Bitext Mining, Cross Lingual Semantic Textual Similarity. In each task, showed better results than existing cross-lingual sentence embedding models.

LUNG CANCER DETECTION | *Tensorflow, Keras, OpenCV*

[GitHub](#)

- The project uses TensorFlow and Keras to build and train Multiple models using transfer learning on a dataset of lung images categorized into 3 different types of lung cancer and normal images.
- The pre-trained models used for applying transfer learning are InceptionV3, resnet50, MobilenetV2. Achieved accuracy of 87.5% by using MobilenetV2 and resnet50 pre-trained models.

Relevant Coursework

- | | | | |
|-------------------------------|------------------------------------|-------------------------------|-------------------------------|
| • Algorithms | • Operating Systems | • Artificial Intelligence | • Statistical Programming |
| • Data Structures | • Data Analytics and Visualization | • Natural Language Processing | • Big Data Analytics |
| • Database Management Systems | • Machine Learning | • Computer Networks | • Parallelization of Programs |

Leadership / Extracurricular

Executive Member | *FPS, IIT Bhilai*

Nov 2023 - Nov 2024

ACHIEVEMENTS

- Secured 2273 OBC category rank in JEE ADVANCE
- Secured Gold medal at District Level in National Science Olympiad.
