

RUPESH KUMAR SINHA

SOFTWARE ENGINEER

Bokaro, Jharkhand | k.rupeshsinha0913@gmail.com | +91 7717732696 | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SUMMARY

Computer science professional with 1 year of experience in Java back-end and front-end web development. Skilled in building efficient, user-focused web applications. Passionate about innovation and collaboration to deliver impactful solutions.

TECHNICAL SKILLS

- **Programming Languages:** Java, JavaScript, Spring Boot, Hibernate, JDBC, React
- **Web Development:** HTML, CSS, Bootstrap
- **Database Management:** MySQL, PostgreSQL
- **Version Control:** GitHub

SOFT SKILLS

Adaptability, Leadership, Time Management, Team Collaboration

PROFESSIONAL EXPERIENCE

Paycraft Solutions

Jan 2024 – Present

Software Engineer-1

Responsibilities/Tasks:

- Designed and developed scalable backend services using Spring Boot, JPA, and PostgreSQL for high-volume fintech transaction systems.
- Implemented dynamic PDF generation via REST APIs and Thymeleaf templates, reducing manual reporting effort by 60–70%
- Integrated secure LDAP-based authentication and role-based authorization, improving enterprise login security and system reliability.
- Built a GL Accounting automation system from scratch, automating transaction reconciliation and reducing manual effort by 80%+.
- Developed and optimized RESTful APIs and third-party integrations, improving response times by 40–60% and ensuring system stability.
- Did API development and integration for NSDL Bank's TimePay mobile application, building secure, production-grade REST APIs and enabling seamless integration with partner systems.
- Implemented scheduler-driven automation jobs for PIN retry handling, card status management, and SMS triggers, ensuring regulatory and workflow compliance

PROJECTS

CoviSafe+(Covid vaccine registration system)

A full-stack application enabling users to create accounts, check vaccine availability, and book appointments at nearby centers.

Responsibilities: Implemented validations, CRUD operations, and backend APIs for frontend integration.

Tech Stack: HTML, CSS, JavaScript, SQL, Spring Boot, Spring Data JPA.

Details: Collaborative project with 5 teammates, completed in 5 days.

Vote Sankalp (Voting Application)

A console-based application for managing voter and candidate records, including vote counts.

Features:

Admin: View candidates and vote counts, remove candidates, track voters per candidate.

User: Register as a voter or candidate, cast votes.

Tech Stack: Java, Hibernate, SQL.

Details: Individual project completed in 5 days.

EDUCATION

Full Stack Web Development (Full Time)

Masai School, Bengaluru, Karnataka

Nov 2022 - Nov 2023

B.Tech. (Computer Science and Engineering)

Brainware University, West Bengal

Aug 2018 – July 2022
